# SAFETY WITH A TWIST

Uncompromising protection: safety switches by R. STAHL

# RELIABLE SAFETY FOR ALL APPLICATIONS

As the name says, safety switches have one main focus: safety. However our user-friendly units not only comply with IEC/EN 62626-1 class 1, making them exceptionally reliable and resilient even in extreme conditions. They are also equipped with 3-way lockable switching handles and automatic locking of the enclosure cover

when switched off. Available for 3-, 4- and 6-pole connections, our switches are suitable for rated operational currents of 10A to 180A and operational voltages between 230V and 690V AC. Their motor switching capacity also satisfies utilisation categories AC-3 and AC-23, DC-1 and DC-23 according to IEC/EN 60947-3.

They can therefore be used to switch off both directly powered and VSD-controlled machine drives quickly and reliably for cleaning, repair or other maintenance jobs – even without trained electrical personnel.
